Rental management

Everything you need to run rented apartments for years: buildings and apartments, tenants and leases, rent and cheques, repairs, and the whole life of every tenancy.

Contents

1. Getting started
2. Entering all your properties
3. Tenants and leases
4. Collecting rent
5. Building maintenance and repairs
6. The 10-year cycle
7. Questions landlords ask

1. Getting started

Rental management is a digital file for every apartment you rent out in Israel: the building and its apartments, the tenants and the lease, rent and cheques, repairs and documents. Everything in one place, in English or Hebrew, on a computer or a phone.

Good to know from day one: the money never passes through us. Your tenant pays straight into your bank account or your Bit, as today. The system is not connected to your bank and never charges the tenant. It records, reminds and keeps your books in order.

Creating your account

1. Go to the rental management page on the NadLan site: nad-lan.co.il/my-rentals.
2. Tap **Start managing, free**.
3. Sign in with your account on the site. No account yet? Create one on the sign-in page.
4. Your account opens empty, with three steps waiting for you.

The first three steps of an empty account

1. **Add a building:** street, city and number of floors. Your building appears in 3D.
2. **Mark your apartments:** tap the apartment on the building, then fill in the tenant, the rent and the lease dates.
3. **Send the tenant a link:** on WhatsApp, with no app and no password. Through it the tenant sees payments, reports repairs and signs the lease.

Underneath there are three buttons: **New property** starts your first building, **Import from Excel** brings in many apartments at once (chapter 2), and **Look at a sample file first** opens a ready-made file to try things out.

A new account: three steps and three ways to begin.

Look at a sample file first

Want a feel for it before you enter anything? Tap **Look at a sample file first**. A landlord's file opens with three buildings and five apartments: a tenant who is late, cheques to deposit, an urgent repair, and a vacant apartment with applicants. At the top you will see **Sample data**: tap and change anything, nothing is sent and nothing is saved. When you are done, tap **Back to my data**.

The main screen: Today

This screen opens every time you sign in. Four numbers at the top: **Collected this month** out of what is expected, the **Open balance** of all your tenants, **Vacant apartments** and **Open repairs**. Below them, **Needs your attention** (chapter 4), and next to it **This month, apartment by apartment**, each apartment in its colour: green is paid, amber is not paid yet, red is late, grey is vacant.

The menu: **Today**, **Properties**, **People**, **Money** and **Repairs**. On a phone, **More** also holds **Leasing**, **Documents**, **Reports**, **Settings** and **Guide**. This guide lives there, inside rental management, in the language you work in. The top bar has a search for an apartment, tenant or repair, a switch between English and Hebrew, and an **Add** button for anything new.

Today: what came in, what is open, and what is waiting for you.

First things first: your own details

Before your first tenant, open **Settings** and fill in:

- **The name tenants see** and **My WhatsApp**. Your number is also needed for your quick link to manage from the phone.
- **How tenants pay you: Account details for transfers, Bit number** and **Payment link (if any)**. Whatever you write here appears to the tenant on their personal page and in every reminder.

How tenants pay you

What you write here appears to the tenant in the portal and in reminders.

Account details for transfers Bank, branch, account and payee name

Bank Leumi, branch 800, account 12345678, Dan Cohen (sample)

Bit number

050-000-0999

Payment link (if any)

Save

Manage from WhatsApp

The link goes to your own WhatsApp and is valid for 14 days. It opens your to-do list, payment marking and repair updates. You can revoke it any time, and every use is logged.

Send a link to my WhatsApp

Privacy

Settings: how tenants pay you. Your tenant sees exactly this.

2. Entering all your properties

One building

1. Tap **New property** (on the **Properties** screen, or through **Add**).
2. Fill in **Street and number**, **City**, **Number of floors** and **Apartments per floor**. You may add **Year built** and **Protection**, and tick **Elevator**, **Parking** and **Solar water heaters on the roof**.
3. Tap **Save**. The building page opens, with the building drawn in 3D from your details.

The apartments: floors and positions

The building page has two parts that work together: the building in 3D, and next to it the **Floors**, one row per floor. A coloured apartment is yours. A dashed square is an apartment you have not marked yet: tap it to add a new apartment on the right floor and in the right position. You can also tap an apartment on the building itself.

In the apartment form, fill in **Apartment name** (for example Apt 7), **Floor**, **Position on the floor**, **Rooms**, **Size (m²)** and **Facing**. For the position, 0 is the first apartment to the right of the entrance. For a vacant apartment, add the **Asking rent** and **Available from** as well.

The screenshot shows the 'Rental management' app interface. At the top, there's a search bar and a language selector (English). Below the search bar, there's a sidebar with navigation options: Today, Properties, People, Money, Repairs, Leasing, Documents, Reports, and Settings. The main content area displays the address '78 Arlozorov St, Tel Aviv-Yafo' and a 3D model of a building. To the right of the 3D model is a 'Floors' section with a grid of apartment positions. The grid shows floors 1 through 5, with columns for apartment positions. Some positions are marked with colored squares (green for 'Paid', yellow for 'Not paid yet', red for 'Late', blue for 'Vacant', and grey for 'Not mine'). Below the 3D model, there's a table titled 'Apartments in the building' with columns for Apartment, Tenant, Rent, Lease end, and Status.

Apartment	Tenant	Rent	Lease end	Status
Apt 7 Floor 3	The 1 and family	₪7,800	31 Jul 2022	Paid

The building page: the building in 3D with its floors beside it. Every colour tells the apartment's status.

Each apartment on the building also carries a mark when it has an open repair, or when its lease ends within 90 days. Tapping a floor's name, in the floors list or on the corner of the building, highlights the floor and opens a card for that floor: the apartments on that floor with tenant, rent and debt, the floor's total rent and open debt, and its open repairs. Every line opens the apartment or the repair. **Back to the whole building** closes the card.

A floor's card: the floor stands out on the building, with its money and repairs in one place.

Further down the building page: **Apartments in the building** as a table, **Building expenses**, and the building's **Documents**, such as the insurance policy or the land registry extract.

The apartment card

Tapping an apartment anywhere in the system opens its card. At the top, the action buttons: **WhatsApp reminder**, **Mark as paid**, **New repair** and **Tenant link**. Below them, the tabs: **Overview**, **Lease**, **Payments**, **Repairs**, **Documents**, **Journal** and **The apartment**.

The apartment card: everything about the apartment, one tap away.

The journal records everything that happened: messages sent, messages from the tenant, a signature, a new document. You can add your own **Journal entry**: a note, a phone call, a meeting or a message you received.

Import from Excel

Already keep a spreadsheet of your apartments? No need to type it all again.

1. In Excel or Google Sheets, select the rows **together with the header row** and copy them.
2. In the app, tap **Import from Excel** and paste into **Paste the rows here**.
3. Tap **Check**. A summary appears, such as "Found 2 buildings, 3 apartments and 2 tenants", with a preview of the first rows.
4. If everything looks right, tap **Import**.

Column names are recognised automatically, in English or Hebrew. The header only has to be one of these, or start with one of them:

Column	English headers recognised
Address (required)	address, street
City (required)	city, town
Apartment	apartment, apt, unit
Floor	floor
Rooms	rooms
Tenant	tenant, tenant name

Phone	phone, mobile
Rent	rent, monthly rent
Lease start	start, lease start
Lease end	end, lease end
Payment day	pay day

The same columns are recognised by their usual Hebrew headers too, so a sheet kept in Hebrew imports as it is. Capital letters do not matter.

What the import does:

- Every row is an apartment. Rows with the same address and city go into the same building. Its number of floors is the highest floor in the sheet, with four apartments per floor; you can correct this later with **Edit** on the building.
- Dates are read as 1.3.2026, 01/03/26 or 2026-03-01: day first, then month. Amounts may include a comma, such as 5,200.
- A row with a tenant also creates a contact. If it also has a rent and a lease start, an active lease is created. A lease that started before the current month is set to **Follow payments from** the 1st of this month, so old months never show as debt. Without a lease end, the lease runs for one year. Without a payment day, rent is due on the 1st. The lease is created unlinked, paid by bank transfer, and the tenant gets the language you are working in. You can change all of this later by editing the lease.

Rental management

[Import from Excel](#)
[Look at a sample](#)

Import from Excel

Copy the rows with their header row from Excel or Google Sheets and paste them here. Columns like address, city, apartment, floor, tenant, phone, rent, lease start and lease end are recognised automatically.

Paste the rows here

Address	City	Apartment	Floor	Tenant	Phone	Rent	Lease start	Lease end
10 Herzl St	Holon	Apt 4	2	Michal Avraham	050-0000201	5200	1.3.2026	28.2.2027
10 Herzl St	Holon	Apt 9	4					
5 Bialik St	Ramat HaSharon	Apt 1	1	John Smith	050-0000202	8400	2026-06-01	2027-05-31

Found 2 buildings, 3 apartments and 2 tenants.

10 Herzl St, Holon	Apt 4	Michal Avraham	₪5,200
10 Herzl St, Holon	Apt 9	-	-
5 Bialik St, Ramat HaSharon	Apt 1	John Smith	₪8,400

[Check](#)
[Import](#)

Import from Excel: paste, check, and only then import.

Import each sheet once only. Importing the same sheet again creates its buildings and apartments again. Adding apartments later? Paste only the new rows.

An existing lease: Follow payments from

Most landlords join in the middle of a lease. So that no old debts are invented, there is a special field. The Excel import does this by itself. When the lease form gets a start date before the current month, the field **Follow payments from** appears, already set to the 1st of this month. Rent is recorded from that date on; anything before it is not counted.

If the tenant really does owe something from before, record that debt separately as a **Charge** (chapter 4).

01/10/2026

☐ Pets allowed

Save Cancel

A lease that began a year ago: tracking starts this month, with no invented arrears.

3. Tenants and leases

A new lease

1. On a vacant apartment's card, tap **New lease** (or on the **Leasing** screen, or through **Add**).
2. Choose the **Apartment** and the **Tenant**. Tenant not on the list yet? Choose **New tenant (fill in below)** and enter their name, phone and language.
3. Under **Dates and money**: **Lease start**, **Lease end**, if there is an option also **Option**, **notice by**, **Rent**, **Payment day of the month** (1 to 28) and **Payment method**.
4. Fill in the linkage and the securities (next sections), and tap **Save**.

From then on the system records the rent every month by itself, on the payment day, in advance for the month, as is usual in Israel. The first charge is never earlier than the lease start.

The tenant's language matters. Every message to the tenant, their personal page and the lease translation are in the language you chose for them, even when you work in Hebrew.

CPI linkage

Under **Linkage**, choose **Linked to the Consumer Price Index**, then:

- **Linkage update**: **Once a year**, **Every six months**, **Every quarter** or **Every month**.
- **Linkage percent**: 100 for full linkage, or less if that is what you agreed (say 50).
- **Never below the base amount**: if the index falls, the rent stays at the original amount.

The base index is the one of the lease start date. At every update the system calculates the change by the known index, straight from the Central Bureau of Statistics (CBS) calculator, and adjusts the charge by itself. On the apartment card's **Lease** tab, **Check the linkage now** shows what the updated rent would be today.

☒ Never below the base amount

Securities

Security cheque (₪)

18000

Promissory note (₪)

Cash deposit (₪)

☐ Guarantors

Linkage and securities. The blue line shows the legal cap for this lease.

Securities and the legal cap

Under **Securities**, fill in the **Security cheque**, **Promissory note** and **Cash deposit**, and tick **Guarantors** if there are any. While you type, a line shows the legal cap for this lease. If the security cheque and the cash deposit together go over it, the line turns into a warning, and the lease also appears on your to-do list.

What the law says: under Israel's Rental and Borrowing Law (the Fair Rental amendment), all securities together are capped at the lower of two amounts: three months' rent, or one third of the rent for the whole term of the lease. For a one-year lease at ₪6,000 a month, the cap is ₪18,000. The system will not record a cash deposit above the cap.

The lease document

On the **Lease** tab, tap **Printable lease**. A Residential Lease Agreement (unprotected tenancy) opens, built from your details: the parties, the apartment, the term, the rent, the linkage, the securities, the option and pets. A clause that does not apply to your lease is left out. The lease opens in the tenant's language; the English translation states that the Hebrew text governs.

Residential Lease Agreement (unprotected tenancy)

Made and signed on 3 October 2026 between Dan Cohen (the "Landlord") and Daniel Brooks (the "Tenant"; if more than one, jointly and severally liable).

Whereas

The Landlord holds the rights in the apartment at 30 HaNevi'im St, Haifa, Apt 3, floor 2, 2.5 rooms (the "Apartment"), furnished.

The Tenant wishes to rent the Apartment as a residence, and the parties agree under the Rental and Borrowing Law, 5731-1971, including its chapter on residential leases.

1. Preamble

The preamble and the annexes are part of this agreement. The Hebrew text governs; a translation is for convenience only.

2. The lease

The Landlord leases the Apartment to the Tenant as a residence only. The tenancy is unprotected: the Tenant's Protection Law does not apply, and no key money was or will be paid.

3. Term

The term starts on 1 May 2026 and ends on 30 April 2027.

5. Rent

Rent is ₪4,300 a month, paid in advance by the 5 of each month, by bit, to the account or means the Landlord states in writing.

Fees the Landlord pays for any management service, including NadLan, are the Landlord's alone and are not passed on to the Tenant.

7. Running costs

During the term the Tenant pays municipal tax (amona), water, electricity, gas and building-committee fees for ongoing maintenance, and moves the accounts to his name where possible.

The Landlord bears building insurance, the purchase and upgrade of fixed systems in the Apartment and payments he owes third parties, including any brokerage fee he owes, as section 25(a) of the law requires.

8. Delivery and condition

The Landlord delivers the Apartment on 1 May 2026 fit for habitation: with drainage, electricity and lighting, natural light and ventilation through closable openings, drinking water, a toilet separate from the living rooms, and no unreasonable risk to safety.

The printable lease, built from your lease details.

The template follows the Rental and Borrowing Law. For a complex deal, or special terms, have a lawyer go over it.

Signing by personal link

On the **Lease** tab, in the **Signature** card, tap **Send for signature**. A ready WhatsApp message to the tenant opens, in their language, with a personal link valid for 14 days. The tenant:

1. opens the link on the phone and taps **Read the full lease**;
2. types their full name and signs with a finger in **Sign here with your finger or mouse**;
3. ticks **I have read the lease and agree to its terms** and taps **Sign**.

The signature is kept with the exact text that was signed (with a digital fingerprint of the text), the date and time, and the link it came through. The apartment card then shows **Signed**, with the name and the time. A lease that was sent but is not signed yet appears on your to-do list with **Resend for signature**.

What the tenant sees: name, a finger signature, a tick, done.

The Lease tab: the terms, the signature and the deadlines.

The tenant's personal link

On the apartment card, tap **Tenant link**. A WhatsApp message in the tenant's language opens, with a personal link. Your tenant installs nothing and needs no password: they open the link from WhatsApp and see one page with everything:

- the rent, the payment day and the next payment, and how to pay you (from your settings);
- an **I've paid** button to report a payment (chapter 4);
- **Report a repair** with a photo, and the deadline the law gives for the repair (chapter 5);
- the lease details, and the documents you chose to share;
- WhatsApp to you, and **Write a message**, which goes into the lease's journal.

The link is valid until the end of the lease plus 60 days, the time in which the deposit is returned. No phone number for the tenant? A **Your link is ready** window opens so you can copy the link or share it on WhatsApp.

People: tenants, guarantors and professionals

Page 15 of 36 · nad-lan.co.il

4. Collecting rent

What the system does, and what it does not. It does not move money, is not connected to your bank and never charges a tenant's card. Your tenant pays you directly, by transfer, standing order, Bit or cheques. The system records the charges, reminds, takes the tenant's "I've paid" report, and keeps the books. A payment is recorded only when you record or confirm it.

The monthly charges

Every active lease gets a rent charge each month, on its payment day, in advance for the month. A payment you record closes the oldest debt first, then the next one. So it is always clear which month is open.

Recording a payment received

1. On the to-do list, next to the apartment, tap **Mark as paid**. You can also do it from the apartment card, or on the **Money** screen with **Payment received**.
2. The amount is already filled in from what is open. Check the **Date** and the **Payment method**, and add a **Reference** if you like: a cheque number or a transfer reference.
3. Tap **Save**. The apartment's colour updates at once.

The screenshot shows a mobile app interface for recording a payment received. The form is titled "Payment received" with a close button (X) in the top right corner. It contains several input fields: "Lease" with a dropdown menu showing "Apt 14 · 78 Arlozorov St · Dana Cohen"; "Amount (₪)" with a text input field containing "6400"; "Date" with a date picker showing "03/10/2026"; "Payment method" with a dropdown menu showing "Bank transfer"; "Reference" with a text input field and a placeholder "Cheque number or transfer reference"; and "Notes" with a text input field. At the bottom, there are two buttons: "Save" (in a blue circle) and "Cancel".

Payment received: the amount fills itself in from what is open.

The apartment's **Payments** tab also has **Payment confirmation**: a printable note in which you confirm to the tenant that you received the latest payment. It comes from you as the landlord and is not a tax receipt.

The tenant reports: I've paid

On their personal page the tenant taps **I've paid** and fills in the amount, date, method and reference. The report does not count as a payment until you confirm it. Your to-do list shows "the tenant reported a payment of...

Confirm?". Check that the money arrived, then tap **Confirm payment**.

A bounced cheque

Every line in the books has a ... button, **Line actions**. For a cheque that came back, choose **Cheque bounced**. The payment no longer counts and the month is open again. You may fill in a **Bank fee to charge the tenant**, which is recorded as a separate charge.

A bounced cheque, with the bank fee charged to the tenant.

A mistake? Void the line, never delete it

A line in the books is never deleted. Entered a wrong amount? Under ... choose **Void this line** and write the **Reason**. The line stays, marked **Cancelled** with the reason, and then you record the right one. Your books stay clean for any review and for your accountant.

A line is never deleted: it is voided with a reason.

The to-do list

Needs your attention builds itself from your data, most important first: debt, legal deadlines, repairs. What can appear on it:

- Rent that is late, or a month not paid yet.
- A lease ending within 90 days, a lease that has ended, an option window closing within 60 days.
- A cheque to deposit, and a tenant's payment report waiting for you.
- Securities above the legal cap, and a lease sent for signature but not signed.
- A new repair, an urgent repair, and a repair past its legal deadline.
- A former tenant who still owes, a refund due to a former tenant, and a deposit to return.
- A vacant apartment, and a new application to rent.
- In December and January: a reminder to report and pay on the 10% tax route.

Next to each item is the button that solves it: reminder, mark as paid, renewal offer, deposited, confirm. Eight items are shown; **Show all** opens the rest.

Needs your attention: the biggest risk at the top.

WhatsApp reminders, in the tenant's language

Tap **WhatsApp reminder**, on the to-do list or the apartment card. A friendly message opens, ready, in the tenant's language: the amount, the month, and how to pay you (Bit, bank account or link, from your settings). You can edit the text. **Send on WhatsApp** opens your own WhatsApp with the message, and you press send. You can also **Copy** it.

The message leaves from your phone and is logged in the journal. The system never sends messages by itself or in your name.

A reminder, ready to go. You only press send.

Manage from WhatsApp: your quick link

On **Today** or in Settings, tap **Send a link to my WhatsApp** (your number must be in Settings first). You receive a personal link valid for 14 days. It opens your to-do list on the phone with no password: mark rent as paid, confirm a tenant's report, send a reminder, move a repair to **In progress** or **Done**, and add an expense. Reports, documents and settings stay in your full account.

Your quick link: today's tasks, from the phone.

Extra charges and expenses

- A **Charge** is an extra amount the tenant owes under the lease, such as water, electricity, municipal tax (arnona) or a repair they caused. It adds to the tenant's balance. Our own fees are never passed on to the tenant.
- An **Expense** is money you paid: municipal tax, building committee, repair, insurance, mortgage, water, electricity, gas, tax, fees. Choose the property, and if you like an apartment (or **The whole building**). Expenses feed the profit and loss and the annual summary.

The Money screen and reports

On the **Money** screen, move between months with the arrows and see **Expected this month**, **Collected**, **Expenses** and **Net**. The tabs: **Transactions**, **Cheques**, **Expenses**, **Profit and loss** for the last 12 months by property, **CPI linkage** and **Tax**.

Print

The yearly summary: income per property, expenses by type.

Report totals are based on money actually collected. A deposit received is not income, and a debt written off is not income.

5. Building maintenance and repairs

What the law says: under the Rental and Borrowing Law, a defect that prevents reasonable living must be fixed within 3 days, and any other defect within 30 days. Every repair in the system gets a deadline by this rule, counted from the day it was opened.

A repair request from the tenant, with a photo

On their personal page the tenant taps **Report a repair**, says in one sentence what happened, and adds details and a photo from the camera. Under **Can you live in the apartment as usual?** they mark whether it is urgent, or leave Not sure. The window also carries an emergency note: a gas smell, sparks or a structural crack means leaving the apartment and calling emergency services. The photo is made smaller before it is sent, so it uploads quickly even on a weak signal.

The repair appears on your **Repairs** screen under **New**, and on your to-do list. The tenant sees the repair and the date by which it should be fixed.

The screenshot shows a mobile app interface for reporting a repair. At the top is a title bar 'Report a repair' with a close button (X). Below is a text input field labeled 'What's wrong, in one sentence' containing the text 'A leak under the sink'. Underneath is a section 'Details (optional)' with a larger text area. Then is a section 'Add a photo' with a 'Choose File' button and the text 'No file chosen'. Below that is a dropdown menu labeled 'Can you live in the apartment as usual?' with 'Not sure' selected. At the bottom, there is a small disclaimer: 'Gas smell, sparks or a structural crack: leave the apartment and call emergency services now (gas 104, electricity 103, police 100). Then report here.' and two buttons: 'Save' and 'Cancel'.

The tenant reports a repair, with a photo, from the phone.

A repair you open yourself

On the apartment card, or through **Add**, tap **New repair** and write **What's wrong, in one sentence**. As you type, a line appears such as "Recognised from the description: Water heater · Urgent · up to 3 days to fix". In **Urgency** you can leave **Recognise from the description**, or choose **Urgent** or **Standard** yourself.

Cancel

The urgency and the type are recognised from the words themselves.

How the recognition works: by a fixed list of words, not by guessing. Words such as "no water", "no power", "gas smell", "flood", "sparks", "exposed wire" or "break-in" mark a repair as urgent, in English or Hebrew. Other words set the type: plumbing, electrical, air conditioning, water heater, locks and more. Your own choice always wins.

The repair card and the professional

Tapping a repair opens its card. At the top, the stages: **New**, **Visit booked**, **In progress**, **Waiting**, **Done**. From the repair's type the system suggests which professional fits, with a link to **Professionals nearby**.

1. **Choose a professional:** pick from your list, or add one with **New professional...** at the end of the list. If you fill in the **Visit time**, the repair moves to **Visit booked**.
2. **Send to the professional:** a WhatsApp message to them opens, with a personal link to the repair, valid for 30 days.
3. **Update the tenant:** a ready message to the tenant, in their language, with the current stage.
4. **Add a photo** and **Journal entry** for the record.

The repairs board, and a cost that becomes an expense

The **Repairs** screen shows every repair by stage, each with its deadline; a repair past its deadline is marked in red. On the repair card, **Cost** keeps what it cost. When you move a repair with a cost to **Done**, the system asks whether to record the cost as an expense, so it reaches your profit and loss.

+ New repair

Under Israel's Rental and Borrowing Law (12)25: a defect that prevents reasonable living is fixed within 3 days, any other within 30 days.

The repairs board: every repair at its stage.

The apartment's appliances and systems

On the apartment card's **The apartment** tab: **Apartment details**, a drawing of the apartment **Inside the apartment** with points for its appliances, and **Systems and appliances**. Tap **Appliance or system** to add a water

heater, A/C, electric panel, meter, fridge, oven, washing machine and more, with brand, model, installation month, **Warranty until** and **Last service**. Each appliance shows whether it is **Under warranty** or the **Warranty ended**. **Report a fault** opens a new repair named after the appliance. While that repair is open, the appliance is marked on the drawing, and tapping it opens the repair.

Inside the apartment: every appliance in its place.

Systems and appliances: warranty, last service, and a fault in one tap.

6. The 10-year cycle

A rented apartment goes through tenants, renewals, index updates and tax years. This chapter walks you through all of it.

The deadlines of every lease

On the **Lease** tab, the **Deadlines** card lists the dates that matter, in order:

- The last day for the landlord's notice: 90 days before the lease ends.
- The last day for the tenant's notice: 60 days before the end.
- The lease end, and the end of the option window if there is one.
- Return of the securities: 60 days after the end.
- The next linkage update.

Under the Rental and Borrowing Law, the landlord gives notice 90 days before the end and the tenant 60 days. Securities are returned within 60 days of the apartment being returned.

Renewal

Ninety days before the end, the lease appears on your to-do list with a **Renewal offer**: a ready WhatsApp message to the tenant. Once you agree, tap **Renew the lease** on the **Lease** tab and fill in **Lease start** (already set to the day after the current end), **Lease end** and **Rent**.

What happens: the current lease closes the day before the new term. Tenants, guarantors and securities move to the new lease. A cash deposit moves with the tenant, in two visible lines: returned on the old lease, received on the new one. With CPI linkage, the new base index is the one of the new start date. Send the new lease for signature again.

A new term

The current lease closes the day before the new term. Tenants, guarantors and the deposit move to the new lease.

Lease start

01/08/2027

Lease end

31/07/2028

Rent

7800

Renew the lease Cancel

Renewal: a new term, and the deposit moves with the tenant.

End of the lease

On the **Lease** tab, tap **End the lease** and fill in:

- **Date the apartment is returned:** the day you got the keys back.
- **Reason: End of the term, Early exit, By agreement or Eviction.**
- **Charge the last month by days:** ticked by default.

Rent stops on the day the apartment is returned. Charges for months after that date are voided, and the last month is counted by days. For example, in a lease that starts on the 1st, a tenant who leaves on the 10th of a 30-day month pays a third of that month. Untick the box and the last month stays whole. If the tenant stays on after the lease end, the extra months are charged at the same rent. Any debt left stays in the books and on the to-do list until it is closed. And from that same day, the 60-day count to return the deposit starts.

End of the lease: the last month by days.

The deposit: received, used, returned

The apartment's **Payments** tab has a **Deposit** card: **Held now**, the **Legal cap**, and after the end also **Return by**. Three buttons:

- **Deposit received:** records a cash deposit you received. A deposit is not income and does not count as rent. An amount that, with the security cheque, goes over the legal cap is not recorded.
- **Use part of the deposit:** part of the deposit pays a debt; choose what it was **Deducted for:** rent, repair, water, electricity, gas, municipal tax, building committee or other. It is recorded as a payment of the debt.
- **Return the deposit:** recorded with the date and the way you returned it.

From the day the apartment is returned, the return is on your to-do list: "return a deposit of... by...". In its last two weeks it moves up the list, and once the date has passed it reads "the legal deadline to return the deposit has passed".

A deposit above the legal cap is not recorded.

The deposit card: how much is held, the cap, and when it goes back.

Only unpaid rent, damage or bills may be deducted from the deposit. The rest goes back within 60 days of the apartment being returned.

A former tenant: debt, write-off and refund

A debt does not disappear when the lease ends. On the apartment card's **Overview** tab, **Former tenants, open matters** shows the debt, the credit or the deposit still held, with a **Payments** button that opens the old lease's books. The debt is also on your to-do list: "a former tenant still owes...".

How a former tenant's debt is closed:

- **Use part of the deposit**, if a deposit is held.
- The tenant pays and reports **I've paid** from their link (it stays alive until 60 days after the lease end), and you confirm.
- **Write off the debt**, if you decide to let it go. The write-off closes the debt in the books and is not counted as income.

The other way round: if the tenant paid more than was charged, a **Tenant's credit** appears, and the to-do list says "a former tenant is owed a refund". **Refund the tenant** records the refund, up to the credit.

Cancel

A write-off: closed in the books, not counted as income.

Eviction

When a lease ends in eviction, choose **Eviction** as the reason when you end the lease. The legal process itself goes through a lawyer and the court, not through the system. What the system gives you is the **Lease evidence file** on the **Reports** screen: every payment, repair and message of the lease, in order. It is a summary of what was recorded, not a legal document, but it saves your lawyer a lot of work.

A new tenant

An apartment has become vacant? On its card, or on the **Leasing** screen, tap **Application link** and send it to people who are interested. The link is valid for 30 days. The applicant sees the apartment's details, fills in name, phone, who will live there and the move-in date, reads and accepts the privacy notice, and can upload payslips, a bank statement or an ID. Every file is stored encrypted.

An application: the applicant fills it in,
and you see it all.

List the apartment takes you to the site's form for publishing a listing. Want help finding a tenant? A licensed broker from the site's brokers list does it under a signed brokerage order.

With a linked lease there is nothing to remember: at every update the monthly charge is already calculated by the index. And if the Central Bureau of Statistics site is down on the day a charge is recorded? The charge is recorded at the base amount and marked as waiting for the index. Your to-do list says "charges are waiting for the CBS index. The difference will be recorded automatically when it arrives". When the figure arrives, the exact difference is recorded by itself as a separate charge, with the same date.

CPI linkage: a calculator, and your linked leases.

The yearly tax report

At the end of a year:

1. On the **Reports** screen, open the year's **summary**: income per property, expenses per property and type. Print it, or download the **Excel file** for your accountant. The printed summary is for the current year; for last year's report, give your accountant the Excel file, which holds every line from January of last year.
2. On the **Money** screen, the **Tax** tab estimates the two residential routes: the exemption up to the ceiling, and the 10% route. Enter the total monthly rent from all your apartments, including any not managed here.
3. In December and January, your to-do list reminds you that on the 10% route the report and payment are due by 30 January.

The tax figure is an estimate only. Before you report, check with the Israel Tax Authority or an accountant.

Export everything

Your data, always. At any time, on the **Reports** screen or in Settings, tap **Download all data** and get one file with everything: properties, apartments, people, leases, every line of the books since the start, repairs, the journal and the list of documents. The files themselves are downloaded from each document. For work in Excel, every report has an **Excel file**.

Privacy and security

- The personal details of tenants, applicants, guarantors and professionals (name, phone, email, ID number) are stored encrypted. Signatures and files are encrypted too. The encryption key is kept apart from the data itself.
- Only you see the information. A tenant sees only their own lease, their payments and the documents you shared with them.
- You are responsible for your tenants' information, and NadLan keeps it for you. An applicant accepts a privacy notice before sending an application.
- Every action taken through a link is written to the journal.
- A contact or document you delete is kept for 30 more days, then deleted for good.
- Lines in the books are never deleted: they are voided with a reason.
- **Delete all data**, in Settings under **Privacy**, deletes every property, tenant, payment and document. To confirm, type the word **ERASE**. It is immediate and final, so download all your data first.

The screenshot shows the 'Settings' screen of the 'Rental management' app. The header includes a search bar and language options. The left sidebar lists navigation items: Today, Properties, People, Money, Repairs, Leasing, Documents, Reports, and Settings. The main content area is divided into several sections: 'My details' with fields for tenant name and WhatsApp number; 'How tenants pay you' with fields for account details and a payment link; 'Manage from WhatsApp' with a button to send a link; 'Privacy' with buttons to download or delete all data; and 'My plan' showing the current plan and its features.

Settings: your details, payment, privacy and plan.

Plans

In Settings, under **My plan**, you see your plan: **Free**, **Pro** or **Business**. The free plan suits a small number of apartments; Pro and Business are for larger portfolios and management companies. Prices and terms will appear here once they are published.

- A plan is paid securely through Morning: card, Bit, Google Pay or Apple Pay. The invoice is emailed to you.
- Three days before a plan ends, you get an email with a link to renew. After the end you have a week to renew, and nothing is deleted.
- Cancel any time. Even above the free limit, no apartment is ever deleted: your apartments stay, you just cannot add new ones.

7. Questions landlords ask

Does the rent go through you?

No. Your tenant pays you directly, by transfer, standing order, Bit or cheques. The system records, reminds and reconciles. The tenant can report "I've paid" from their link, and you confirm it.

Can my tenant use it in English while I work in Hebrew, or the other way round?

Yes. Every tenant has a language. Their personal page, the lease translation and every WhatsApp message to them are in their language, while you work in yours. In the lease, the Hebrew text governs.

Is a lease signed through the link valid?

A lease may be signed electronically. The signature is kept with the exact text signed, its date and its time. For a complex deal, have a lawyer go over the lease.

My tenant gave me 12 cheques. How do I record them?

Each cheque as a **Payment received** with the method **Cheque** and the date written on it. The cheques wait on the **Cheques** tab, and you are reminded to deposit each one. A cheque that comes back is marked with **Cheque bounced**, with the bank fee.

How is the linkage calculated, and what if the index falls?

By the known index, from the Central Bureau of Statistics calculator, from the lease start to the update date, at the linkage percent you set. If you ticked **Never below the base amount**, a fall in the index never lowers the rent.

How much security may I ask for?

By law, all securities together are capped at the lower of three months' rent or one third of the rent for the whole term. The lease form shows the exact cap for your lease, and warns you if you go over it.

I entered a lease that has run for a year, and an old debt appeared. What now?

Edit the lease and check **Follow payments from**. Charges already recorded before that date can be voided with ... and **Void this line**, with a reason. With the **New lease** form and with the Excel import, the field fills itself with the 1st of the current month.

My tenant leaves in the middle of the month. How much do they pay?

In **End the lease**, enter the date the apartment is returned and keep **Charge the last month by days** ticked. The last month is counted by the days the tenant was in the apartment, and later charges are voided.

What about tax on the rent?

The **Tax** tab estimates the exemption and the 10% route, and the **Reports** screen has the yearly summary and an Excel file for your accountant. It is an estimate only; the report itself goes to the Israel Tax Authority, or through your accountant.

Who sees my data, and what happens if I stop using the system?

Only you. Personal details and files are stored encrypted. At any time you can download all your data in one file, or delete everything. If a paid plan ends, nothing is deleted.
